

Fyosamu

Web, Bots & Automation Developer — freelance, remote

Email: hkay7645@gmail.com • Portfolio: fyosamu.github.io • GitHub: github.com/Fyosamu
Remote (UTC+3:30) • Available 10–20 hrs/week • Invoicing in USDT (crypto) or invoice via platform

PROFILE

Independent developer shipping production web apps, messaging bots and automation pipelines end-to-end: I design the approach, build it, deploy it, and verify it live — you get working software with the source and documentation, not mockups. I work AI-agent-first (an AI coding agent drives the implementation while I own design, review and verification), which is how I move fast without a team.

SELECTED WORK (ALL LIVE, LINKS VERIFIABLE)

AI tools directory & content engine — ai-tool-scout

Full site: content build, docs pipeline, deployed on GitHub Pages. I audited every outbound URL and contact mailbox live and removed the dead ones before launch.

fyosamu.github.io/ai-tool-scout/

Storefronts — e-commerce

Two complete store builds (catalogue, cart, checkout flow, product pages) shipped as static sites.

fyosamu.github.io/novabits-store/ • fyosamu.github.io/fashion-store/

Telegram bots & automation

Channel summariser, scheduling and moderation bots, plus small utility bots — Python + Telegram Bot API, run as long-lived services with error handling and logging.

AI video pipeline — media automation

Automated short-form video production: script generation → TTS → subtitles (Whisper) → assembly (FFmpeg), parameterised so a single run produces many variants.

Tooling & data work

REST/CRUD backends (Node & Python, SQLite), link/lead scanners, scheduled scrapers and reporting scripts; personal trading-bot research with recorded results.

SKILLS

- React / Next.js / HTML / CSS / Tailwind
- Node.js & Python (Flask, scripting)
- Telegram Bot API, Discord bots
- SQLite / Postgres, REST APIs, CRUD
- FFmpeg, Whisper, TTS, Stable Diffusion
- GitHub, CI, GitHub Pages deployment
- Scraping, scheduling, data pipelines
- AI-agent-driven development workflow

How I work: async-first, weekly sync is fine; I send a demo link early so nothing is a surprise. **Payment:** USDT (crypto) is preferred and simplest for me; platform/contract invoicing also works. **Honest note:** this CV lists only work I can link to or demonstrate — no invented employers, dates or titles. Ask me anything about any line above and I'll show you the code.
